Weeds - Objective	* Beds are to present a weed free appearance at all times. * Weeds are not be allowed to restrict the growth of the species intended for the plot * Areas immediately adjacent such as footpaths and planter edges up to 1m away are included for weed control to ensure beds always present well * No rogue plants	* No rogue plants Weed free Weed free Weed free	* No rogue plants 2% 10% 100mm tall, 100mm wide Weeds in excess of the maximum height to be removed by hand or mechanically reduced in size prior to herbicide treatment	* No rogue plants 5% 10% 150mm tall, 100mm wide Weeds in excess of the maximum height to be removed by hand or mechanically reduced in size prior to herbicide treatment	* No rogue plants 5% 10% 150mm tall, 100mm wide Weeds in excess of the maximum height to be removed by hand or mechanically reduced in size prior to herbicide treatment	* No rogue plants 5% 30% 500mm (Weeds cant restrict growth of natives) Weeds in excess of the maximum height to be removed by hand or mechanically reduced in size prior to herbicide treatment	* No rogue plants 15% 30% Visible edge only 150mm tall, 100mm wide Weeds in excess of the maximum height to be removed by hand or mechanically reduced in size prior to herbicide treatment	* No rogue plants 5% 10% 100mm tall, 100mm wide Weeds in excess of the maximum height to be removed by hand or mechanically reduced in size prior to herbicide treatment	* No rogue plants 5% 10% 150mm tall, 100mm wide Weeds in excess of the maximum height to be removed by hand or mechanically reduced in size prior to herbicide treatment
Weeds - % Cover Total	Weed free	Weed free	2%	5%	5%	5%	15%	5%	5%
Weeds - % Cover any 1m2	Weed free	Weed free	10%	10%	10%	30%	30%	10%	10%
Weeds - Height/Width Max (mm)	None allowed	Weed free	100mm tall, 100mm wide	150mm tall, 100mm wide	150mm tall, 100mm wide	500mm (Weeds cant restrict growth of natives)	Visible edge only	100mm tall, 100mm wide	150mm tall, 100mm wide
Plant pests (noxious)	None allowed	None allowed	None allowed	None allowed	None allowed	None allowed	None allowed	None allowed	None allowed
Mulch depth	n/a	50mm -100mm No Mulch required * on sites where the slope is over 30 degrees, * Where flooding occurs * Wherehe intended vegetation has totally covered the site and bare ground cannot be seen from outside the bed	50mm -100mm No Mulch required * on sites where the slope is over 30 degrees, * Where flooding occurs * Wherehe intended vegetation has totally covered the site and bare ground cannot be seen from outside the bed	50mm -100mm No Mulch required * on sites where the slope is over 30 degrees, * Where flooding occurs * Wherehe intended vegetation has totally covered the site and bare ground cannot be seen from outside the bed	None allowed	Mulched once at inception	None	50mm -100mm if already present	None
Mulch Type	n/a	Fine bark mulch, aged tree chip or compost * Alpine/Rock Garden – Crushed rock * Woodland Garden – Bark, Aged tree chip or Mushroom compost, approved weed free organic compost * Herbaceous Garden – Aged tree chip, Mushroom compost, approved weed free organic compost or fine granulated bark	* Bark or aged tree chip * Alpine/Rock Garden – Crushed rock * Woodland Garden – Bark, Aged tree chip or Mushroom compost, approved weed free organic compost * Herbaceous Garden – Aged tree chip, Mushroom compost, approved weed free organic compost or fine granulated bark	Bark or aged tree chip * Alpine/Rock Garden – Crushed rock * Woodland Garden – Bark, Aged tree chip or Mushroom compost, approved weed free organic compost * Herbaceous Garden – Aged tree chip, Mushroom compost, approved weed free organic compost or fine granulated bark	n/a	n/a	Bark or aged tree chip	bark mulch, gravel or lime chip	n/a
Mulch placement	n/a	* Clear of trunks, plant stems, plant crowns not buried. * Evenly Spread * Not allowed to spill over garden edges.	* Clear of trunks, plant stems, plant crowns not buried. * Evenly Spread * Not allowed to spill over garden edges.	* Clear of trunks, plant stems, plant crowns not buried. * Evenly Spread * Not allowed to spill over garden edges.	n/a	n/a	* Clear of trunks, plant stems, plant crowns not buried. * Evenly Spread * Not allowed to spill over garden edges.	* Clear of trunks, plant stems, plant crowns not buried. * Evenly Spread * Not allowed to spill over garden edges.	n/a
Pruning - Outcome	n/a	* build a strong framework, * maintain shape and balance, * ensure that flowering wood is maximised * keep the plant's growth habit both healthy and vigorous, * to the dimensions required and within the space available * remove a danger or a nuisance, * repair minor damage as a result of wind or vandalism	* build a strong framework, * maintain shape and balance, * ensure that flowering wood is maximised * keep the plant's growth habit both healthy and vigorous, * to the dimensions required and within the space available * remove a danger or a nuisance, * repair minor damage as a result of wind or vandalism	* build a strong framework, * maintain shape and balance, * ensure that flowering wood is maximised * keep the plant's growth habit both healthy and vigorous, * to the dimensions required and within the space available * remove a danger or a nuisance, * repair minor damage as a result of wind or vandalism	* build a strong framework, * maintain shape and balance, * ensure that flowering wood is maximised * keep the plant's growth habit both healthy and vigorous, * to the dimensions required and within the space available * remove a danger or a nuisance, * repair minor damage as a result of wind or vandalism	* repair minor damage as a result of wind or vandalism * remove a danger or a nuisance	Clearance trimming only	* build a strong framework, * maintain shape and balance, * ensure that flowering wood is maximised * keep the plant's growth habit both healthy and vigorous, * to the dimensions required and within the space available * remove a danger or a nuisance, * repair minor damage as a result of wind or vandalism	* maintain shape and balance, * ensure that flowering wood is maximised * keep the plant's growth habit both healthy and vigorous, * to the dimensions required and within the space available * remove a danger or a nuisance, * repair minor damage as a result of wind or vandalism
Pruning - Metrics	n/a	* Pruning cuts will be made using accepted and most up to date techniques * ensuring that all dead, diseased, twiggy or spindly shoots, along with crossing branches are removed and new growth is encouraged. * Pruning cuts must be clean, at appropriate angles and at appropriate sites * pruning must not crush, split or otherwise damage stems or plants in any way SEE METHODOLOGY FOR SPECIFIC ROSE TYPES	* No dead, weak, diseased or damaged vegetation * Intended shape is retained * Definition between neighbouring plants retained * Health, vigour & flowering potential are maximised * All pruning to industry best practices * Prune to nodes, dont leave stubs * Clearance from footpaths - unobstructed access - vertical max 2.5m, horizontal max 100mm * Clearance from roads, carparks, railways - unobstructed access - vertical max 2.5m, horizontal 100mm * Clearance from roads, carparks, railways - Site lines not obstructed. Street gardens are a maximum of 1m high	* No dead, weak, diseased or damaged vegetation * Intended shape is retained * Definition between neighbouring plants retained * Health, vigour & flowering potential are maximised * All pruning to industry best practices * Prune to nodes, dont leave stubs * Clearance from footpaths - unobstructed access - vertical max 2.5m, horizontal max 100mm * Clearance from roads, carparks, railways - unobstructed access - vertical max 2.5m, horizontal max 100mm * Clearance from roads, carparks, railways - Site lines not obstructed. Street gardens are a maximum of 1m high	* No dead, weak, diseased or damaged vegetation * Intended shape is retained * Definition between neighbouring plants retained * Health, vigour & flowering potential are maximised * All pruning to industry best practices * Prune to nodes, dont leave stubs * Clearance from footpaths - unobstructed access - vertical max 2.5m, horizontal max 100mm * Clearance from roads, carparks, railways - unobstructed access - vertical max 2.5m, horizontal max 100mm * Clearance from roads, carparks, railways - Site lines not obstructed. Street gardens are a maximum of 1m high	* Clearance from footpaths - unobstructed access - vertical max 2.5m, horizontal max 100mm * Nothing dead, dying, diseased	* removal of deadwood and dead/dying plants is only required if the plants are prominent, a risk to the health of other vegetation, particularly unsightly or hazardous	* No dead, weak, diseased or damaged vegetation * Intended shape is retained * Definition between neighbouring plants retained * Health, vigour & flowering potential are maximised * All pruning to industry best practices * Prune to nodes, dont leave stubs * Clearance from footpaths - unobstructed access - vertical max 2.5m, horizontal max 100mm * Clearance from roads, carparks, railways - unobstructed access - vertical max 2.5m, horizontal 100mm * Clearance from roads, carparks, railways - Site lines not obstructed. * Street gardens are a maximum of 1m high	* Maximum 100mm growth on grialnea & mixed natives & eskalonia hedges * Maximum 50mm growth on Korolia hedges * Maximum 30mm growth on buxus hedges * evenly cut and maintained to accepted horticultural standards using best practice methodologies * evenly cut and maintained to the specified dimensions. * cut just above the previous periods, seasons or year's growth * Kept to maximum of 2m tall * trimming of private boundary side not necessary

Dead heading - Objective	* Display is aesthetically pleasing * Build a strong framework. * Maintain shape and balance. * Ensure that flowering is maximised * Keep the plant's growth habit both healthy and vigorous * Maintain the plants dimensions								
Dead heading	2%	Summer dead heading to industry best poactice	20% deadheads allowed 10% deadheads allowed in Japanese garden	30% deadheads allowed	30% deadheads allowed	n/a	Not required	30% deadheads allowed	Not required
Pests & Diseases - Objective	* Maintenance staff will develop appropriate strategies for monitoring. * Maintain preventative and/or responsive control programmes to provide appropriate and early treatment to prevent and/or control any pests and diseases that will or are adversely impacting plant growth, health, appearance and longevity of display. * Care should be taken to minimise any impact on other beneficial insects and other desirable biological agents that may be present	* No adverse impact on plant health and appearance. * Care should be taken to minimise any impact on other beneficial insects and other desirable biological agents that may be present	* No adverse impact on plant health and appearance. * Care should be taken to minimise any impact on other beneficial insects and other desirable biological agents that may be present	* No adverse impact on plant health and appearance. * Care should be taken to minimise any impact on other beneficial insects and other desirable biological agents that may be present	* No adverse impact on plant health and appearance. * Care should be taken to minimise any impact on other beneficial insects and other desirable biological agents that may be present	n/a	* No adverse impact on plant health and appearance. * Care should be taken to minimise any impact on other beneficial insects and other desirable biological agents that may be present	* No adverse impact on plant health and appearance. * Care should be taken to minimise any impact on other beneficial insects and other desirable biological agents that may be present	
Pests & Diseases - Metric	provide appropriate and early treatment to prevent and/or control any pests and diseases that will or are adversely impacting plant growth, health, appearance and longevity of display. * Report drainage issues	provide appropriate and early treatment to prevent and/or control any pests and diseases that will or are adversely impacting plant growth, health, appearance and longevity of display. Fertile as required	Maintained to a healthy standard. Report presence of any pets and diseases at each visit	Maintained to a healthy standard. Report presence of any pets and diseases at each visit	Maintained to a healthy standard. Report presence of any pets and diseases at each visit	n/a	Maintained to a healthy standard. Report presence of any pets and diseases at each visit	Maintained to a healthy standard. Report presence of any pets and diseases at each visit	
Health & vigor	* maintain soil conditions and health suitable for the production of outstanding seasonal bedding displays * sustain healthy, vigorous growth and flowering for the maximum time throughout the season while minimising pest and disease incidence	* Irrigate as required to sustain healthy, vigorous growth and flowering for the maximum time throughout the season while minimising pest and disease incidence * Watering at base only	* Only fertilise where nutrient deficiency and poor weak plant growth is apparent	* Report struggling plants or weak plant growth.	* Report struggling plants or weak plant growth.	* Report struggling plants or weak plant growth.	* Report struggling plants or weak plant growth.	* Report struggling plants or weak plant growth.	
Irrigation				Not required unless extreme dry conditions occur	Not required unless extreme dry conditions occur	Not required	Not required	Not required unless extreme dry conditions occur	
Plant coverage	100% as appropriate to each design	90%	90%	90%	90%	Report >10% plant loss during the first 5 years of establishment	90%	90%	100%
Edging	Permanent edging - e.g. a path or a concrete edging strip, the edge of the bed will be maintained with a clear chamfer between 50 mm and 75 mm deep and the garden shall be shaped to rise from the bottom of that edge (maximum slope 45 degrees from horizontal) so soil collapse is minimised. Where the garden edge is contiguous with a grassed area - maintenance staff will form and maintain a sloping edge (approx. 15° degrees from the vertical) to the grassed area consistent with the boundary and shape of the garden, and shall clip (trim) the grass edge at regular intervals such that the edge retains its shape, configuration and uniformity and growth is no longer than the maximum length of grass for the adjoining lawn grade (usually grade 1 or 2)	Hard edging - e.g. a path or a concrete edging strip, the edge of the bed will be maintained with a clear chamfer between 75 mm and 100 mm deep and the garden shall be shaped to rise from the bottom of that edge (maximum slope 45 degrees from horizontal) so soil or mulch spillage is minimised. Soft Edging - e.g. turf - form and maintain a sloping edge (approx 15 to 25 degrees from the vertical) to the grassed area consistent with the boundary and shape of the garden. * Clip the grass edge at regular intervals such that the edge retains its shape, configuration and uniformity * Edge kept to 75-100mm deep	Hard edging - e.g. a path or a concrete edging strip, the edge of the bed will be maintained with a clear chamfer between 75 mm and 100 mm deep and the garden shall be shaped to rise from the bottom of that edge (maximum slope 45 degrees from horizontal) so soil or mulch spillage is minimised. Soft Edging - e.g. turf - form and maintain a sloping edge (approx 15 to 25 degrees from the vertical) to the grassed area consistent with the boundary and shape of the garden. * Clip the grass edge at regular intervals such that the edge retains its shape, configuration and uniformity * Edge kept to 75-100mm deep	Hard edging - e.g. a path or a concrete edging strip, the edge of the bed will be maintained with a clear chamfer between 75 mm and 100 mm deep and the garden shall be shaped to rise from the bottom of that edge (maximum slope 45 degrees from horizontal) so soil or mulch spillage is minimised.
